SKILLS

Languages: Python, Swift, Java, Dart, HTML, CSS, JavaScript, TypeScript, C/C++, SQL

Frameworks & Libraries: React, Flutter, Django, Node.js, PyTorch, Express

Tools: AWS, MongoDB, MySQL, PostgreSQL, Postman, Jira, Nginx, GitHub Actions, Figma

EDUCATION

University of British Columbia

Bachelor of Applied Science – Computer Engineering

Vancouver, BC

May 2024

WORK EXPERIENCE

Full Stack Software Engineer – Korotu Technology

May 2024 – Present

Technologies: Python, Swift, JavaScript, Django, React, Node.js, MySQL, Docker

- Led an Agile team to develop and launch a production-grade React web and iOS mobile app for tree-metric measurements, taking ownership of release cycles, feature prioritization, and timely bug resolution
- Designed and deployed a novel LiDAR-based tree diameter measurement feature in Swift, reducing mean percentage error from 13% to 6%
- Developed and tested Python backend and MySQL database to allow communication with the frontend via REST APIs, allowing users to upload, view, and edit content seamlessly across both web and mobile
- Streamlined CI/CD by using Xcode, TestFlight, and GitHub Actions to perform source control quality checks, run unit tests, and distribute sprint releases to internal and external testers

Mobile Application Developer (Internship) – Ditch Labs

Sep 2022 – Dec 2022

Technologies: Dart, Flutter, Bloc, Mockito

- Implemented the Bluetooth Low Energy (BLE) communication protocol for data transfer in a cross-platform Flutter mobile app, ensuring reliable connectivity between a medical inhaler and smartphone
- Applied Bloc state management to separate business logic and from UI, supported by Mockito unit tests to ensure app behaves correctly under various connectivity conditions

PROJECTS

Android Multiplayer Trivia Game | <https://github.com/chen-vv/kashoot-trivia-game>

Technologies: JavaScript, Jest, Node.js, MongoDB

- Designed and implemented RESTful APIs and backend logic using Node.js and MongoDB to power a full-stack multiplayer trivia game with minimal latency and instant user feedback
- Developed real-time gameplay using sockets and integrated external services (trivia API, Google OAuth), with comprehensive 100% test coverage achieved for backend functionality by testing with Jest

Interactive Bus Stop Database System

Technologies: Java, SQL, Oracle

- Designed and implemented a robust Oracle-based database using SQL, integrating Java Swing for front-end interactions to support writing, editing, and filtering reviews based on specific attributes
- Ensured secure database interactions by implementing input sanitization and using prepared statements to prevent SQL injection
