SKILLS

Languages: JavaScript, TypeScript, Python, Swift, Java, Flutter/Dart, SQL, HTML, CSS, C/C++

Tools: React, Django, Node.js, PyTorch, AWS, MongoDB, MySQL, Postman, Jira, Nginx, GitHub Actions

EDUCATION

University of British Columbia

Bachelor of Applied Science – Computer Engineering

Vancouver, BC

May 2024

WORK EXPERIENCE

Full Stack Software Engineer / Team Lead – Korotu Technology

May 2024 – Present

Technologies: Python, Swift, JavaScript, Django, React, Node.js, MySQL, Docker

- Led an Agile team to develop and launch a production-grade React web and iOS mobile app for tree-metric measurements, taking ownership of release cycles, feature prioritization, and timely bug resolution
- Designed and deployed a novel LiDAR-based tree diameter measurement feature in Swift, reducing mean percentage error from 13% to 6%
- Refined augmented reality geolocation pipeline and cut root mean square error from ~10m to <1m, delivering 10x more precise positioning in remote areas without GPS signal
- Successfully trained and deployed an iOS-optimized model capable of classifying tree species based on bark images and computer vision with 85% accuracy

Mobile Application Developer (Internship) – Ditch Labs

Sep 2022 – Dec 2022

Technologies: Dart, Flutter, Bloc, Mockito

- Implemented the Bluetooth Low Energy (BLE) communication protocol for data transfer in a cross-platform Flutter mobile app, ensuring reliable connectivity between a medical inhaler and smartphone
- Applied Bloc state management to separate business logic and from UI, supported by Mockito unit tests to ensure app behaves correctly under various connectivity conditions

Web Designer (Internship) – Mediate BC

Jul 2022 – Sep 2022

Technologies: JavaScript, PHP, WordPress, Drupal

- Migrated the organization's website from Drupal to WordPress, modernizing page layouts for enhanced user experience
- Leveraged plugins to automate the mediator application process, restructure blog content for improved navigation, and automate newsletter distribution for higher user engagement

PROJECTS

Android Multiplayer Trivia Game | <https://github.com/chen-vv/kashoot-trivia-game>

Technologies: JavaScript, Jest, Node.js, MongoDB

- Designed and implemented RESTful APIs and backend logic using Node.js and MongoDB to power a full-stack multiplayer trivia game with minimal latency and instant user feedback
- Developed real-time gameplay using sockets and integrated external services (trivia API, Google OAuth), with comprehensive 100% test coverage achieved for backend functionality by testing with Jest

Interactive Bus Stop Database System

Technologies: Java, SQL, Oracle

- Designed and implemented a robust Oracle-based database using SQL, integrating Java Swing for front-end interactions to support writing, editing, and filtering reviews based on specific attributes
- Ensured secure database interactions by implementing input sanitization and using prepared statements to prevent SQL injection
